

(j) **CLAIM**

The flying object is to made of two hollow discs welded on the circumference. High Pressure gas is generated inside the hollow portion. A number of nozzles are fixed around the circumference. The nozzles are fixed in such a manner that high pressure gas will leaves tangentially this force will impart a high speed rotary motion to the disc. When the speed increases and at very high speeds the disc will leave the ground and start flying at a high speed.

STATUS IDENTIFIER

Claim has been previously indicated.
